

## About us

We are a Swedish family business with a long history in making ZAVA® Seal-Rings. It all started in 1986 at the SCA Pulp mill in Sundsvall. The Pulp was looking for a solution to the typical sealing problems they had with filter leakage.

Frans Sramek, an electrical engineer found the solution to their problem, he invented the ZAVA® Seal-Ring. He worked very hard to develop the ring. He was working evenings and sometimes even nights just to find the solution. During the week and daytime he had a fulltime job at the mill. He also had a family with three daughters to take care of.

When the ring was invented it was tested for almost six months on the mills filters and the reaction was very positive from those who had been changing seals constantly around the world. The four hours of unpleasant work changing sealings was cut to a few minutes.

In January 1988 the ZAVA® Seal-Ring was patented and the ZAVA trademark was registered for the first time in March 1992.

Today the ZAVA® Seal-Ring is manufactured in Hudiksvall, Sweden, and is sold by retailers all over the world. We have two companies, ZAVA Ring AB, which works with the national market and ZAVA Tec AB, which works international.

Frans is still active in the family business, his daughter Zuzana Sramek is now CEO for the companies and works together with her husband, daughters and son-in-law.

We are looking forward to the day when everyone knows what the ZAVA® Seal-Ring is and hopefully also using it.
